Proposed 3Q 2026 AMTAGVI Enrollment Contest

A two-month enrollment contest for CTAMs

Runs August 1 to September 30, 2026. Prepared July 2026.

A D V A N C I N G I M M U N O - O N C O L O G Y

BUSINESS CONTEXT

■ Treatment capacity increased, but enrollments have softened

Capacity, enrollment, and funnel figures are the team's current numbers for 2H 2026.

FAIRNESS CHECK

■ Territory scale varies too much for a single national leaderboard

BEFORE: one national list

AFTER: grouped by size

Group by size

So we group first. If we simply counted enrollments, the biggest territories would win every time and the smaller ones could never catch up.

Territory size uses our claims data as a stand in for how big each patch is. The real groups will be set from the enrollment numbers.

SCORING METHODOLOGY

■ Each territory is ranked on both volume growth and percent growth ■

How each territory scores

- **Baseline:** average enrollments from **4Q 2025, 1Q 2026, and 2Q 2026**, scaled to the two-month contest period.
- **Volume growth:** contest enrollments minus baseline.
- **Percent growth:** volume growth divided by baseline.
- **Final score:** average of the volume-growth rank and percent-growth rank, within the size group.
- **Top two in each group are paid.**
- **Tie-breaker:** the higher percent growth wins.
- **Quality prize:** goes to the territory in each group with the highest share of enrollments reaching TTP, with at least five enrollments to qualify.

The scoring flow

Enrollment, capacity, baseline, and payout figures are internal planning figures for 2H 2026. Final values subject to leadership approval.

THE BASELINES

■ Here is every territory and the baseline it has to beat, inside its volume group ■

High volume

Quarterly average of 15.8 and above

Territory	Baseline
South FL	14.9
CT / NYC	13.6
Pittsburgh / Cleveland	12.9
South TX / LA	12.2
Mid-Atlantic	11.1
Los Angeles	10.7
Pacific Northwest	10.7
Philly	10.7

Medium volume

Quarterly average of 10.2 to 15.8

Territory	Baseline
Chicago / IN	10.4
Rocky Mountains	10.2
Great South	9.3
Desert Plains	8.9
New England	8.2
OH / MI	8.0
MN / WI	7.3
IN / KY / Cincy	7.3

Low volume

Quarterly average below 10.2

Territory	Baseline
Northern Cal	5.8
Carolinas	5.1
North TX / OK	3.6
AR / MO / Tulsa	2.9
Northern NJ & NYC	2.4
North FL / GA	2.2
Midwest	1.6
San Diego / OC	0.7

Baseline is each territory's average enrollments across 4Q 2025, 1Q 2026, and 2Q 2026, scaled to the two month contest window. Groups are set from that same average and lock the day the contest starts.

EXAMPLE

■ **A smaller territory can win by growing meaningfully versus its own baseline** ■

<i>Territory</i>	<i>Baseline</i>	<i>Contest enrollments</i>	<i>Volume growth</i>	<i>Percent growth</i>	<i>Final score</i>	<i>Place</i>
Indiana / KY	15	21	+6	+40%	1.0	1st
Eastern OH	18	22	+4	+22%	2.0	2nd
Carolinas	20	21	+1	+5%	3.0	3rd

How to read it: Indiana / KY starts from the smallest baseline in the group, yet posts the strongest volume and percent growth, so it wins. Carolinas has the largest baseline but the smallest improvement and finishes last. A high volume territory only wins when it beats its own history.

Illustrative example, not real targets. The quality prize is decided separately within each group. Figures are internal planning figures for 2H 2026.

PAYOUT

- The prize pool uses fixed shares, so leadership can adjust the budget without redesigning the contest

Across all three groups:

Keep it competitive

- A live leaderboard for each group during the contest
- Track who is moving enrollments to TTP for the quality prize
- Every group has winners, low volume territories included

What that means at \$30,000

- Per group, first about \$5,000, second \$3,000, quality about \$2,000
- That is \$10,000 a group, and three groups makes \$30,000
- A bigger or smaller pot uses the very same shares

The pot is set up as a formula, so if leadership picks a different budget every prize updates on its own.
